The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy, che condition is diabetic retinopathy, psoriasis, arthropathy, che condition is diabetic retinopathy, psoriasis, arthropathy, chemanjoina, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenois, head, heat or cold cramma, substance induced neovascularised malignant of the liver, excessive cramma, substance induced neovascular sequelae, or chronic liver sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability cor brain. The peptides are also used to image blood vesels and lymphatic or brain. The peptides are used to image blood vesels and lymphatic or brain. The peptides are used to image blood vesels and lymphatic cor vasculature. The monomeric and bicyclic peptides are used to interfere control inflammation, especially rheumatory agent, to treat a cordinary corticular inflammation, especially rheumatoid arthritis, psoriasis and dishard corticulariants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This synthetic peptide is a claimed example of a kidney-homing peptide that was identified using a novel method for obtaining molecules that home to a selected organ or tissue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a mouse kidney homing peptide. This sequence was identified by using in vivo panning to screen a library of potential organ homing molecules. The present sequence can be used to direct a molety to a kidney tissue, by linking the molety to the present sequence. Examples of potential moleties are drugs, toxins or a detectable label
                                                                                                                                                                                                           ..
0
involves administering a phage display library to a subject, and identifying expressed peptides which home to the desired organ or tissue, e.g. brain, kidney, angiogenic vascular tissue or tumour tissue. The isolated peptides (see AAW13412-52, AAW1181-86) can be used to target e.g. drugs, toxins or labels to the selected organ/tissue (claimed) or to identify and/or isolate target molecules (claimed). The peptides can be directly identified in vivo, as compared to prior art in vitro screening methods, which require further examination to see if they maintain specificity in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kidney; homing peptide; organ targeting; tissue targeting; mouse; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an enriched library fraction containing molecules that selectively home to a selected organ or tissue such as brain, kidney or tumour recovered by in vivo panning. The invention generally relates to the field of molecular medicine, drug delivery and to a method of invivo panning for identifying a molecule that homes to a specific organ. The molecules, e.g., peptides, peptidomimetics, proteins and fragments of proteins contained in an enriched library fraction may be administered to a subject as part of a pharmaceutical composition to from bacteriophage targetted to kidney. The present invention relates to a method of recovering molecules that the present invention relates to a method comprises administering to home to a selected organ or tissue. The method comprises administering to the subject the library of diverse molecules, collecting a sample of the calcadorgan or tissue (e.g. brain or kidney), and recovering from the sample everal molecules that home to the selected organ or tissue. The cample study of the control of the selected organ or tissue. The careening large number of molecules (e.g. peptides), that home to specific organ. The identified molecule is useful for e.g. raising an careening large number of molecules (e.g. peptides), that home to a target molecule, targeting a desired moiety (e.g. antibody specific for a target molecule, targeting a desired moiety (e.g. careing is useful for identifying the presence of cancer in a subject by company to a selected organ and, therefore provides a sugnificant advantage over previous methods, which require that a subject complementation is a subject of a selected organ and, therefore provides a significant advantage over previous methods, which require that a subject of subject identified using an in vitro screening method subsequently be considered to determine if it maintains its specificity in vivo.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a composition comprising a bioactive agent commogeneously dispersed in a targeted matrix (polymer and targeting homogeneously dispersed in a targeted matrix for use as a delivery ligand). Also included are a targeted matrix for use as a delivery convention in the bioavailability of an agent comprising administration of the composition and treating cancer comprising administration of the composition. The method is useful for targeted delivery of a drug, capecially in cancer therapy. The targeting ligand may be a peptide. Examples of targeting peptides targeting receptors in the brain and kidney, considerate peptides, peptides targeting receptors in the brain and kidney, peptides targeting the RGD (Arg-Gly-Asp) motif in, e.g., antibodies, peptides angiogenic endothelium of solid tumours, tissue specific peptides (e.g. of lung, skin, pancreas, intestine, uterus, adrenal gland and retina), and cationic cancer-targeting peptides. The present sequence is a peptide targeting ligand disclosed in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                              Targeted delivery system comprising a bioactive agent homogeneously dispersed in a targeted matrix is especially useful in cancer therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

the present inventiou describes a climatric frotovirus exercises conversely from the corporation and a heterologous short comprising an ecotropic envelope protein and a heterologous short described: (1) a nucleic acid molecule comprising a sequence encoding the described: (1) a nucleic acid molecule comprising a sequence encoding the comparison at the comprising a nucleic acid sequence encoding the chimeric envelope protein comprising a retroviral particle comprising a chimeric envelope protein comprising a retroviral particle comprising a chimeric envelope protein comprising a retroviral at alters viral tropism; (3) altering retroviral tropism; (4) identifying a nucleic acid sequence encoding the chimeric envelope protein comprising to be used in gene therapy. The chimeric retrovirus envelope protein is consecuted in gene therapy. The chimeric retrovirus envelope protein is consecuted in contraing cancer, which comprises providing a cancer cell, e.g. thuman cancer cell and infecting the cancer cell with a virus, e.g. thuman cancer cell and infecting the cancer cell with a virus, e.g. therefologous short peptide ligand and a therapeutically useful gene, e.g. therefore the chimeric envelope protein comprising a encoding thymidine kinase. The present sequence represents a kidney cell transfered peptide, which is given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                    New chimeric retrovirus envelope protein comprising an ecotropic envelope protein and a heterologous short peptide ligand inserted within the ecotropic envelope protein useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a chimeric retrovirus envelope protein (I) comprising an ecotropic envelope protein and a heterologous short
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              chimeric retrovirus envelope protein; ecotropic envelope protein; cytostatic; gene therapy; cancer.

                                                                                                                                                                        The present invention describes a chimaric retrovirus envelope protein (I) comprising an ecotropic envelope protein and a heterologous short peptide ligand inserted within the ecotropic envelope protein. Also peptide ligand inserted within the ecotropic envelope protein. Also cereombinant chimaric acid molecule comprising a sequence encoding the chimaric envelope protein; (3) a recombinant retroviral particle comprising a chimaric envelope protein; (3) a recombinant retroviral particle comprising a chimaric envelope protein comprising a nucleic comprising a chimaric envelope protein that alters viral tropism; (4) altering retroviral tropism; (4) chercilogous short peptide ligand; (3) altering retroviral tropism; (4) dentifying a nucleic acid sequence concerning the chimaric envelope protein is used in gene therapy. The chimaric retrovirus envelope protein is useful for treating cancer. (I) has cytostatic activity and cancer call and infecting the cancer cell with a virus, e.g. thuman cancer cell and infecting the cancer cell with a virus, e.g. chrowing thymidine kinase. The present sequence represents a kidney cell and any chimaric carporation of the present carpetide protein in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vegen (vascular endothelial growth factor). The invention relates to a vegen (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-copy peptide loop fragment from an exposed loop of a growth factor protein and peptides (included loop fragment from an exposed loop of a growth factor protein and peptides dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior copyclisation are used to interfere with angiogenesis, to cyclisation are used to interfere with angiogenesis, condition or lymphangiogenesis, to cyclisation or lymphangiogenesis, to cyclisation or lymphangiogenesis.

CC characterised by angiogenic included neovascularisation or lymphangiogenesis.

The condition is diabetic retinopathy, psoriasis, thead, heat or cold characterised by angiogenic analignant or benign tumour, post-recovery correlated angiogenic dysfunction, diabetes induced neovascular sequelae, incompre-related angiogenic dysfunction, diabetes induced neovascular sequelae, or chronic liver sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal least one piological activity induced by VBGF, VBGF-C or D and correlation in peripheral limbs or in lungs, peritoneal cavity, pleura, a committion with an least one biological activity induced by VBGF, VBGF-C or D and chronic inflammation, especially rheumatoid arthritis, psoriasis and chronic inflammation, especially rheumatoid arthritis, psoriasis and chronic inflammation, especially rheumatoid arthritis, psoriasis and corrections and proper corrections and parthritis and and and activity induced by veget becomes or corrections and activity induced by VBGF, C or D and corrections and activity induced are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunosuppressive; nephrotropic; antirheumatic; antiarthritic; neuroprotective; cytostatic; immunostimulant; antiarthritic; antiaslergic; thyromimetic; antianaemic; haemostatic; dermatological; antiallammatory; cardiant; ophthalmological; uropathic; antidiabetic; antithyroid; antidepressant; hepatotropic.
                                                                                                                                                   Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   B lymphocyte stimulator protein binding protein; BLyS; immune disease; allergy; proliferative disease; infectious disease; arteriosclerosis; inflammatory disorder; hypergammaglobulinaemia; blood clotting; ischaemia; graft-versus-host disease; neurodegenerative disease;

                                                                                                           New B-lymphocyte stimulator binding polypeptide useful in detecting or isolating BLyS or BLyS-like polypeptide comprises a specified amino acid
                                                                                                                                                                                               The invention relates to a B Lymphocyte Stimulator (BLyS) binding polypeptide. BLyS binding peptides bind BLyS or BLyS-like proteins reversibly or irreversibly. The binding peptides are used in detection, isolation and/or putification of BLyS in a solution such as water or a buffer solution, as well as any fluid and/or cell obtained from an individual biological fluid, body tissue, body cell, cell line, tissue culture or other source containing BLyS or BLyS-like polypeptides. The biological fluids sinclude sera, plasma, lymph, blood, blood fraction, urine, synovial fluid, spinal fluid, saliva and mucous. Sequences ABG33415, ABG33415, ABG33458-3386, ABG33859-3386, the invention

                                                                                                                                                                                                                                                                                                                             The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion comprising peptides which comprise a nonclassical cadherin-mediated functions. They can be used for e.g. nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of a drug to a tumour in a mammal, treating cancer in a mammal, enhancing delivery of a drug to a tumour in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting conclassion closes and in a mammal, enhancing delivery to the cortral nervous system, treating apoptosis in a nonclassical cadherin-expression in a mammal, enhancing delivery to the conclassical cadherin-expressing cells, inhibiting synaptic stability in conclassical cadherin-expressing cells, inhibiting synaptic stability in conclassical cadherin-expressing cells, inhibiting synaptic stability in conclassical cadherin-expressing confirmed adhesion of foreign taste in a celecting scar tissue, or enhancing adhesion of foreign tissue in a conclassical modular degeneration, multiple solerosis and diabetes. The mammal. They can also be used for treating e.g. psoriasis, arthritis, age conclassing the process of the process and the process to the process the process in the process the process in the process and the process the process in the process and the process of the proces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metaetasis; neurological disease; cyclic.
                                                                                                                                                              New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gabs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PB-cadherin cell adhesion recognition cyclic peptide SEQ ID NO:4047.

The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion comprising peptides which comprise a nonclassical cadherin-mediated functions. They can be used for e.g. nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting certains of a cancer in a mammal, inhibiting concerning angiogenesis in a nonclassical cadherincer expressing cell, preventing or treating obesity in a mammal; stimulating contral nervous system, treating a demyelinating neurological disease, concrassing vasopermeability in a mammal, enhancing adhesin expressing cells, inhibiting synaptic stability in nonclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age corrected marchial adgeneration, multiple sclerosis and diabetes. The mammal and particular and diadetes; and an analy to AAX64572 represent specifically claimed peptides, and in AAX33183 to AAX66542 to AAX64572 represent specifically claimed peptides, and in AAX33186 represent sequences used in the contrast of the vector in the properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-17; cadherin-18; cadherin-12; cadherin-15; T-cadherin; PB-cadherin; cadherin-16; adherin related neuronal receptor; LI-cadherin; protocadherin; cadherin; desmocollin; calcium binding; cancer; tumour; obesity;
                                                                                                                                                                                                                                                                                                                                                                               New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cadherin-12 cell adhesion recognition cyclic peptide SEQ ID NO:1799.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

                                                                                                                                                                                                                                                                                                                                                                                                                                       11-NOV-11999.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-JAN-1999
                                                                                                                                                                                                                                                                          Synthetic
The present invention describes cadherin modulating agents (WA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating on nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, confiniting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting confined apoptosis in a mammal, simulating conformation of the contral nervous system, treating obesity in a mammal, stimulating contral nervous system, treating a demyelinating neurological disease, conclassical cadherin-expressing cells, inhibiting synaptic stability in nonclassical cadherin-expressing cells, inhibiting synaptic stability in conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age con reducing cart tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age contract can also be used for detection and diagnosis and in bioreactors. Apy66592 to Apx64572 represent specifically claimed peptides, and conclassing cells invention and diagnosis and in bioreactors. Apx64573 to Apx64573 and Apx33183 to Apx33186 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion comprising peptides which comprise a nonclassical cadherin real condition (CAR) sequence. The MAS can be used for endicated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug to a tumour in a mammal, irrating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cancer in a mammal, inhibiting concerning apoptosis in a nonclassical cadhering or treating obesity in a mammal, stimulating contrain nervous system, treating a demyeliating delivery to the contral nervous system, treating a demyeliating seurological disease, conclassical cadherin-expressing cells, inhibiting synaptic stability in nonclassical cadherin-expressing cells, inhibiting synaptic stability in conclassical cadherin-expressing calls, inhibiting synaptic stability in conclassical cadherin-expressing calls, inhibiting synaptic stability in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age related macrolar degeneration, multiple solerosis and inbioreactors. AAV66522 to AAX64572 represent specifically claimed peptides, and in AAX6572 represent specifically claimed peptides, and in the contrast of the process the contrast in a mammal in they can also be used for detection and diagnosis and in bioreactors. AAX6652 to AAX64572 represent specifically claimed peptides, and in the contrast in the process the contrast in the process in the contrast in the contras

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-10-395-032-3574
is Sequence 3374, Application US/10395032
publication No. US20030229199A1
GENERAL INFORMATION:
APPLICANT: Blaschuk, Orest W.
APPLICANT: Symonds, James Matthew
APPLICANT: Symonds, James Matthew
TITLE OF INVENTION: CADHERIN-MEDIATED FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CADHERIN-MEDIATED FUNCTIONS
FILE REPREMENT OR: 100066.40709
CURRENT APPLICATION NUMBER: 105/10/395,032
CURRENT PILING DATE: 2003-03-21
NUMBER OF SEQ ID NOS: 4052
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 3574

Patent No. 574734
GENERAL INFORMATION:
APPLICANT: Kay, B. K.
APPLICANT: Fowlkes, D. M.
TITLE OF INVENTION: Totally Synthetic Affinity Reagents
NUMBER OF SEQUENCES: 186
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds
STREET: 1155 Avenue of the Americas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDIUM TERE: FLOUPEY ALLOAD
COMPUTER: IBM PC COMPACTIBLE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.25

Sequence 5, Application US/08900321

Sequence 5, Application US/08900321

Patent No. 5981712

GENERAL INFORMATION:
APPLICANT: Kin, Young S.
TITLE OF INVENTION: DNA Encoding CAI Resistance Proteins and TITLE OF INVENTION: 1085 Thereof
ITLE OF INVENTION: 1085 Thereof
INTER OF INVENTION: 1085 Thereof
NUMBER OF SEQUENCES: 10
CORRESPONDENCE ADDRESS:
ADDRESSER: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: TEM PC compatible
CORRATING SYSTEM: PC-DOS/MG-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/212,190A
FILING DATE: 14-MR-1994
CLASSIFICTATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: HUNTEY, TOM
REFREENCE/DOCKET NUMBER: 38,498
REFREENCE/DOCKET NUMBER: DHHS Ref. No. 5652223 E-112-94/0
TELECOMMUNICATION INFORMATION:

Sequence 33, Application US/08331383
Patent No. 5605809
GENERAL INFORMATION:
APPLICANT: Komoriya, Akira
APPLICANT: Romoriya, Akira
APPLICANT: Compositions for the Detection of
TITLE OF INVENTION: Proteases in Biological Samples and Methods and Use
TITLE OF INVENTION: Thereof
NUMBER OF SEQUENCES: 56
CORRESPONDENCE ADDRESS:
GORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend Khourie and Crew
STREET: One Market Plaza, Steuart Tower, Suite 2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
              Sequence 149, Application US/08471068
Patent No. 5948635
GENERAL INFORMATION:
APPLICANT: KAY, B. K.
APPLICANT: FOWIKES, D. M.
TITLE OF INVENTION: Totally Synthetic Affinity Reagents
NUMBER OF SEQUENCES: 186
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

NAME/KEY: amino acid analysis, high resolution

NAME/KEY: motlear magnetic resonance and mass

NAME/KEY: spectral MS/MS techniques

OTHER INFORMATION: Phakellistatin 10 is a

OTHER INFORMATION: cell growth inhibitory peptide with

OTHER INFORMATION: cell growth inhibitory peptide with

OTHER INFORMATION: cell line of 2.1 mg/ml.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Score 25; DB 1; Length B;

                                                                                                                                                                                                                                                                                                in all eukaryotic cells.
--- SUBCELLANE LOCATION: Cytoplasmic.
--- MISCELLANEOUS: ON THE 2D-GEL THE DETERMINED PI OF THIS PROTEIN IS:
6.8, ITS MM IS: 46 kDa.
--- SIMILARITY: Belongs to the actin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                    FUNCTION: Actins are highly conserved proteins that are involved in various types of cell motility and are ubiquitously expressed
                                                                                                                                                                                                             "A transaldolase. An enzyme implicated in crab steroidogenesis."; Endocrine 5:23-32(1996).

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vegFp (vescular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabet a carbon separation distances on opposite antiparallel strands of a

centrifugation step.

```
of Selective Interactive Ligands) to obtain a targeting peptide. The BRASIL method of the invention involves: exposing a target to a phage display library in a first phase; exposing the first phase to a second phase; and separating the phage bound to the target from unbound phage. The BRASIL method of the invention allows cell phases to be separated from the remaining unbound phage in a single differential centrifugation step. When compared to conventional cell panning methods, the BRASIL method shows a significant increase in recovery of specific phage and a substantial decrease in Dackground. The BRASIL method is useful for cidentifying targeting peptides. The targeting peptides identified by the combination are useful for treating disease states, such as:

CC diabetes; inflammatory arthritis; atherosclerosis; cancer; autoimmune degenerative disease. The present amino acid sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel method for identifying disease targeting peptides. The method comprises exposing a sample from an organ, tissue or cell type of interset, to a phage display library and recovering phage bound to the sample (the phage expresses targeting peptides). The peptides identified by the method of the invention may

                                                                                    ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for producing a compound library. The novel method involves reducing a biological target into a group of one or more amino acids required for interaction with a ligand, to a generate a model of the biological target, using the model to define a microenvironment in the biological target capable of interacting with the ligand, defining motifs which interact with the microenvironment, and assembling the motifs to generate a compound library for synthesis. The novel method is useful to produce compound libraries for synthesis. The natural ligands such as peptides and proteins or for producing chemical compounds based on drug motifs for screening. This sequence represents a peptide of a G-protein Coupled Receptor (GPCR), which relates to the novel compound library production method of the invention
                                                                                                                                                                                                                                                                                                                                                  ö
               antiatherosclerotic, antidiabetic, antibacterial and antivital activities. The methods and composition are useful for identifying targeting peptides and one or more receptors for a targeting peptides. The targeting peptides are used for selective delivery of therapeutic agents, including gene therapy vectors and fusion proteins, to specific organs, tissues, or cell types in subject. The targeting peptide may also be used for treating diseases such as diabetes mellitus, inflammatory diseases, arthritis, atherosclerosis, cancer, autoimmune diseases, bacterial and viral infections and Hodgkin's disease. The present sequence represents a targeting peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Producing compound library, by generating biological target model using target sequence information, defining microenvironments interacting with ligand and motifs interacting with microenvironment, and assembling

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for producing a compound library. The novel method involves reducing a biological target into a group of one or more amino acids required for interaction with a ligand, to a model of the biological target, using the model to define a microenvironment in the biological target capable of interacting with the ligand, defaining motifs which interact with the microenvironment, and assembling the motifs to generate a compound library for synthesis. The novel method is useful to produce compound libraries for synthesis. The natural ligands such as peptides and proteins or for producing chemical compounds based on drug motifs for screening. This sequence represents a peptide of a G-protein Coupled Receptor (GPCR) including Endothelin ET-A receptor, which relates to the novel compound library production method

The present invention describes a method for screening a ligand library (IL). The method comprises: (a) contacting the IL with an anti-target (AT) to allow the ligands to bind to the AT; (b) separating unbound ligands; (c) contacting the unbound ligands with a selected target (T) to allow binding of unbound ligands to (T) to form a (T)-bound ligand complex (C); (d) separating (C) from ligands which do not bind (T); and (C) id separating (C) from ligands which do not bind (T); and (C) id separating (C) from ligands which do not bind (T); and (C) id separating (C) from ligands which do not bind (T); and (C) id serion a ligand library, e.g., a library of peptides, polypeptides, non-polypeptides or oligonucleotides. A ligand (I) identified by the application. The method is preferably useful for identified by the application. The method is preferably useful for identifying peptides useful in cleaning compositions, which involves contacting peptides useful in cleaning compositions, which involves contacting peptides useful in cleaning compositions, which involves contacting peptides with a target which is a stain such as porphyrin derived stain, tannin derived stain, and soil-based derived stain, and peptide complex and identifying the stain-bound peptide complex. A selective manner of the stain-bound peptide complex. A selective manner 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             method may be used to identify cell type specific surface molecules. Preferred anti-targets include one or more different cell types, cells in different stares, or cells that do not display the surface molecule. ABB05322 to ABB0546 represent phage-peptides ligands which are used in the exemplification of the present invention. (Updated on 29-AUG-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Screening ligand library comprises allowing binding of ligand with antitarget, contacting unbound ligands with selected target to form target-bound ligand complex and identifying target bound ligands on the complex.
                                                                                                                                                                                                                                                                                                      Human; tumour necrosis factor alpha; TNP-alpha; VEGF; detergent; stain; bacteriophage; phage library; vascular endothelial growth factor; collar soil; polyurethane; egg; tea; hair; skin; cleaning composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  identify ligands that bind to a target under harsh conditions. The selective targeting method may be used to screen and identify a ligand useful for therapeutic intervention, e.g., a library of ligands may be screened to identify a tumour-bound ligand. The selective targeting
                                                                                                                                                                               Ascular endothelial growth factor binding peptide V-20 SEQ ID NO:98.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 screening a library of ligands that bind to a target may be used to

The invention relates to a novel isolated, synthetic or recombinant peptide or polypeptide which includes one or more endothelial cell peptide or polypeptide which includes one or more endothelial cell binding protein (ECBP) sequences. A peptide of the invention has anticomputation, vasotropic, antipsoriatic, dermatological, antidiabetic, antiatrbritic, valnerary, antiulcer, coptibalmological, antidiabetic, antiatrbritic, valnerary, antiulcer, antinflammatory, antibacterial, and gynaecological activity. The peptide of antinflammatory, reducing the proliferation and/or migration of complete lal cells, by treating the cells with an ECBP agonist, which is conforbelial cells, by treating the cells with an ECBP antagonist, which is preferably the peptide of the invention and/or migration of the invention. A peptide of the invention is also useful for manufacturing a medicament for promoting angiogenesis at one or more sites in a treated mammal. The medicament is useful for promoting or reducing angiogenesis at one or more sites in a treated mammal. The medicament is useful for promoting or reducing angiogenesis. ECBP antagonise the present sequence represents an ECBP of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel synthetic or recombinant polypeptide useful for promoting, reducin proliferation and/or migration of endothelial cells, and for modulating angiogenesis, has endothelial cell binding protein sequences.
                                                                                                                                                                                               endothelial cell binding protein; ECBP; anti-tumour; cytostatic; vasotropic; antipsoriatic; dermatological; ophthalmological; antidiabetic; antiarthritic; vulnerary; antiulcer; antinflammatory; antibacterial; gynaecological; anglogenesis.
                                                                                                                                                             Endothelial cell binding peptide SEQ ID NO:389.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents an immunogenic peptide with binding affinity for HLA-A3-like molecules. A cytotoxic T cell (CTL) response against a HLA-A3-like molecules. A cytotoxic T cell (CTL) response against a namenogenic peptide (Ag) is induced in a patient by contacting a CTL with an immunogenic peptide of 9-15 amino acids which binds to at least two HLA-A3-like molecules with dissociation constant less than 500 mM and induces a cytotoxic T cell response. The immunogenic peptide has a sequence of 9 amino acids, comprising a binding motif, with from the N-to C-termin: primary anchor sites (PAR) at positions 2 (selected from Ala, Leu, Ile, Val, Met, Ser or Thr) and 9 (Arg or Lys) and at least one secondary anchor sites (SAR), i.e. Tyr, Phe or Trp at positions 3, 6 or 7, and/or Pro at position 8. The immunogenic peptides are used in peptide based vaccines and therapeutic compositions, for treating viral, parasitic or fungal diseases or cancer, e.g. prosetatic cancer, hepatitis B or condyloma acuminatum. They can also be used to elicit a CTL response or condyloma cuminatum. They can also be used to elicit a CTL response to in vitro for subsequent respond to peptide vaccines or other therapies.

The patient does not respond to peptide vaccines or other therapies.

The patient does not respond to Peptide vaccines or other therapies.

The patient does not respond to Peptide vaccines or other therapies.

The patient does not respond to Peptide vaccines or other therapies.

AXY AAY45390 to AAY48214 represent specifically claimed immunogenic peptides can baving a human major histocompatibility complex (MHC) Class I (also known as human leukcyte antigen (HLA)) binding motif. The immunogenic peptides can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, Al. A3.2 cor A24.1 or HLA-B or C) and induce a cytocoxic T cell response against the antigen from which the peptide is derived. Cytotoxic T lymphocytes cor A24.1 or HLA-B or C) and induce a cytocoxic T cell response against the antigen from which the peptide is derived. Cytotoxic T lymphocytes correctly may be a contained by an antigen in the form of a peptide fragment bound to a HLA molecule, rather than the intext foreign antigen itself, and are particularly important in antigen and in fighting viral infections. The peptides are concers in mammals (especially to treat or prevent viral infections and cancers in mammals especially humans) e.g. prostate cancer, hepatitis B concers in immunity cancer in minimisers in individuals susceptible or otherwise at risk of viral infection or cancer, or used to treat chronic or acute conditions. They are also useful diagnostically, and can be used to indice claim expanse, by contacting a cytotoxic T cell with the peptide e.g. to produce CTLs ex vivo for infusion back into a concert cuseful therapeutically and for immunisation as above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ·.
mmunogenic peptide having a human leukocyte antigen binding motif #1302.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New immunogenic peptides with HLA binding motif, useful in treatment and diagnosis of cancers and viral diseases.
                                               Human leukocyte antigen; binding; immunogenic; glycoprotein; MHC; HLA; immune response; T cell activation; major histocompatibility complex; cytotoxic T lymphocyte; CTL; tumour rejection; viral infection; cancer; prostate cancer; hepatitis B; hepatitis C; AIDS; renal carcinoma; vaccine; immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is that of a novel alpha-IID beta-3 integrin (glycoprotein IID/IIIa or CD41/CD61) activating peptide. This cyclic peptide comprises a consensue binding mocif (Val-Pro-Trp) and was identified by focusing a phage library screening on integrin ligands which are not blocked by a GRGDS peptide. The VPW motif is present in the A3-domain of von Willebrand factor (VWf), suggesting that VMf is an interaction. The invention relates to the use of novel peptides (see ABP54823-25) comprising the consensue binding motif as pharmaceuticals for the treament of thrombotic diseases and bleeding disorders, including von Willebrand disease, and in artificial tissue transplants to aid in wound healing and tissue regeneration (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                     New alphaIIb beta3 integrin activating peptides useful for manufacturing a composition for treating or preventing thrombotic or bleeding disorders, e.g. von Willebrand disease, and in wound healing and tissue regeneration.
                                                                                                                                                                                           /note= "binding motif, region specifically described in Claim 1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        virucide; anti-HIV; hepatotropic; antiinflammatory; cytostatic; vulnerary; antiatasthmatic; antialiergic; dermatological; antidiabetic; immunosuppressive; antitrheumatic; antiarthritic; thyromimetic; protozoacide; amoebicide, antibacterial; gene therapy; virus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The invention relates to a novel purified and isolated polymucleotide c((NI) of Parapoxvirus ovis (PPVO) comprising a nucleotide sequence (SI, or defined in the specification). Or its complementary sequence, fragment or functional variant. A polymucleotide of the invention has virucide, anti-HIV, hepatotropic, anti-Hiflammatory, cytostatic, virucide, anti-HIV, hepatotropic, hereafted prima virus polymucleotides, or recombinant viruses comprising a Vaccinia virus polymucleotides, or recombinant viruses comprising a Vaccinia virus paper or influences, herpes virus infections, inversible (e.g. hepatitis, papillomatosis, herpes virus infections, infections or influence, virus infections, non-viral infections (e.g. cancer, leukaemia, warrs or other skin proliferative disease (e.g. cancer, leukaemia, warrs or other skin coplasms), inflammatory disease (e.g. Crohn's disease, Coppiasms), inflammatory disease (e.g. Crohn's disease, conditions related to healing of wounds), allergic disease, and/or autoimmune diseases (systemic lupus erythematosus, Sjogren's disease, coppiance is used in the exemplification of the invention.
                                                                                                                                                                                                                                                          New polynucleotide and recombinant proteins of Parapoxvirus ovis, useful for manufacturing a medicament for treating virus related disease, viral infections, non-viral infections, proliferative disease or inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present sequence is that of a novel alpha-IIb beta-3 integrin (glycoprotein IIb/IIIa or CD41/CD61) activating peptide. This cyclic peptide comprises a consensus binding motif (Val-Pro-Trp) that was identified by focusing a phage library screening on integrin ligands, which are not blocked by a GRODS peptide. The motif is present in the A3-domain of von Willebrand factor (VWf), suggesting that VWf is an activator of the alpha-IIb beta-3 complex, enabling stable platelet-VWf interaction. The invention relates to the use of novel peptides comprising the consensus binding motif as pharaceuticals for the treatment of thrombotic diseases and bleeding disorders, including von Willebrand disease, and in artificial tissue transplants to aid in wound healing and tissue regeneration (all claimed)
                                                                                                                                                                            New alphaIIb beta3 integrin activating peptides useful for manufacturing a composition for treating or preventing thrombotic or bleeding disorders, e.g. von Willebrand disease, and in wound healing and tissue regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "binding motif, region specifically described in Claim 1"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Alpha-IIb beta-3 integrin activator; integrin; CD41; CD61; glycoprotein IIb/IIIa; von Willebrand disease; coagulant; vulnerary; cyclic.
